

# Data.csv Structure

File `data.csv` should follow structure, where each "run" is suffixed by `_` and the index of the run.  
For example the columns could be

- `time__1`
- `x__1`
- `y__1`
- `time__2`
- `x__2`
- `y__2`

whaz

For simple singular trajectories, it remains to be done per [BTHS-19 - Explore how many trajectories can be used as opposed to just one](#)
